Experience

Comulate | Senior Software Engineer
<https://www.comulate.com/>

Apr 2026 - Present
San Francisco, CA

Developing an autonomous insurance servicing agent alongside ML engineers and an insurance SME, in close partnership with a design-partner brokerage.

- Architected a unified pipeline for production runs and offline evals, combining sandboxed execution (E2B), webhook-triggered orchestration with dedup/gating, and context assembly over a ~1M-document BigQuery corpus.
- Improved agent eval accuracy by ~60% through prompt engineering, harness iteration, and custom tooling to trace agent reasoning, diagnose context gaps, and match workstreams across threads.
- Shipped an AI-native email client with source-linked agent summaries, suggested replies, and a diff viewer for auditing agent edits.

Overjet | Senior Software Engineer
<https://overjet.ai>

Aug 2024 - Apr 2026
San Francisco, CA

Led a 6-engineer squad modernizing frontend and backend stacks for a Provider Network Management platform, delivering credentialing and payer enrollment workflows.

- Spearheaded a data model re-architecture to centralize ownership across providers, practices, and payers, eliminating sync complexity and unblocking 3 major payer launches.
- Secured commercial contract with large payer by shipping a production-ready Public API in two weeks, replacing legacy Express routes with a type-safe Hono/Arctype architecture.
- Migrated test infrastructure from serial Dockerized Postgres to parallelized Pglite, reducing CI runtime by 60% and cutting local execution from several minutes to sub-minute.

Medallion | Software Engineer
<https://medallion.co>

May 2022 - Aug 2024
San Francisco, CA

Built automation and onboarding features across the stack at a fast-moving health-tech startup using Django, React, and GraphQL.

- Introduced GraphQL by building core abstractions and migrating REST endpoints, then drove adoption through pairing and internal knowledge sharing.
- Built a high-throughput provider import pipeline using Celery and Customer.io, decreasing turnaround times by 30%.

American Express | Software Engineer
<https://americanexpress.com>

Jan 2021 - May 2022
New York, NY

Built site and infrastructure features on Amex's GCS Commercial team using React, Redux, and GraphQL.

- Executed A/B tests, including a mobile carousel enhancement projecting \$150M in annual incremental revenue.
- Built an internal Chrome extension to automate auth syncing, improving developer workflow times by 90%.

Heat.wav | Technical Co-Founder
<https://heatwav.co>

Aug 2018 - Sep 2022
New York, NY

Led technical development of a location-based music & artist discovery platform that placed in the quarterfinals at NYU InnoVention, and semifinals at RU Innovators.

- Built and deployed a location-based mobile app from scratch, managing the full lifecycle from Figma prototyping to Heroku/Testflight deployment.

Education

Rutgers University, New Brunswick, NJ
Bachelor of Science - Computer Science

Sep 2017 - Dec 2020
Honors: Magna cum laude

Skills

Languages: TypeScript, Python, JavaScript, SQL, Java, Shell, HTML, CSS

Frameworks/Tools: React, Next.js, Hono, Django, Express, Drizzle ORM, Arctype, Flutter, Claude Agent SDK, Braintrust

Technologies: PostgreSQL, GraphQL, Docker, AWS, GCP, BigQuery, Terraform, MongoDB, Redis
