Experience

Overjet | Senior Software Engineer
<https://overjet.ai>

Aug 2024 - Present
San Francisco, CA

Core Product Engineer and Technical Lead for a 6-engineer Provider Network Management (PNM) squad, driving the end-to-end modernization of both frontend and backend stacks while delivering critical credentialing and payer enrollment workflows.

- Spearheaded the migration to a 'Provider-first' architecture, centralizing data ownership to eliminate sync complexity and unblocking the launch for 3 major payers.
- Secured commercial contract with large payer by shipping a production-ready Public API in two weeks, replacing fragile Express routes with a type-safe Hono/Arktype architecture.
- Migrated test infrastructure from serial Dockerized Postgres to parallelized Pglite, reducing CI runtime by 60% and cutting local execution from several minutes to sub-minute.
- Modernized the frontend by introducing GraphQL for E2E type safety while refactoring tightly-coupled legacy components into a modular, hook-based architecture.
- Consolidated fragmented polyglot services into a unified TypeScript monolith, drastically reducing cognitive overhead and maintenance while restoring synchronous data consistency.

Medallion | Software Engineer
<https://medallion.co>

May 2022 - Aug 2024
San Francisco, CA

Developed performant, automation-centric product initiatives as a full-stack engineer utilizing Django, React, and GraphQL at a fast moving health-tech startup.

- Pioneered GraphQL integration, migrating REST endpoints and cultivating an active community to improve dev velocity.
- Built a high-throughput provider import pipeline using Celery and Customer.io, decreasing turnaround times by 30%.
- Integrated real-time verifications using Celerybeat/Pusher, ensuring compliance while streamlining operations.

American Express | Software Engineer
<https://americanexpress.com>

Jan 2021 - May 2022
New York, NY

Developed site/infrastructure related features and enhancements as a full stack engineer on Amex's GCS Commercial team using React, Redux, and GraphQL - making a combined impact of several hundred million dollars annually.

- Executed A/B tests, including a mobile carousel enhancement projecting \$150M in annual incremental revenue.
- Spearheaded site-wide accessibility improvements by cataloging violations and reducing outstanding issues by 95%.
- Built an internal Chrome extension to automate auth syncing, improving developer workflow times by 90%.

Heat.wav | Technical Co-Founder
<https://heatwav.co>

Aug 2018 - Sep 2022
New York, NY

Led technical development of a location-based music & artist discovery platform that placed in the quarter finals at NYU InnoVention, and semi finals at RU Innovators.

- Built and deployed a location-based mobile app from scratch, managing the full lifecycle from Figma prototyping to Heroku/Testflight deployment.

Education

Rutgers University, New Brunswick, NJ
Bachelor of Science - Computer Science

Sep 2017 - Dec 2020
Honors: Magna cum laude

Skills

Languages: TypeScript, JavaScript, Python, SQL, Java, C, Dart, Shell, HTML, CSS

Frameworks/Tools: Hono, Drizzle ORM, Arktype, React, Express, Next.js, Django, Flutter, Figma

Technologies: GraphQL, PostgreSQL, MongoDB, Docker, AWS, GCP, Terraform, Redis
